

Structure

Summary of Theses

Summary

I Introduction and Background

- 1 Status Quo and the Aims of the Study
- 2 Terminology
- 3 Driving Forces: The Attitudes of Relevant Groups to CO₂ Capture and Storage

II Technologies and Process Chains

- 4 An Overview of CCS Processes
- 5 CO₂ Capture Methods for Power Plant and Hydrogen Production
- 6 CO₂ Transport
- 7 CO₂ Storage
- 8 Central Aspects of CO₂ Transport Infrastructure

III Comparative Analysis and Assessment

- 9 Criteria for a Comparative Assessment of CCS
- 10 Life Cycle Assessments for Selected CCS-Processes
- 11 Other Ecological Assessment Criteria for CCS
- 12 Development of Electricity and Hydrogen Generation Costs with CCS
- 13 Other Energy Sector Criteria

IV Systems Analysis: A National Perspective

- 14 Systems Analysis of CCS Scenarios

V Global Aspects

- 15 CCS in the International Context

Appendix
